

# How To Make Websites?

Should you want to build a website, you must follow the following procedure. First, it is vital that you be acquainted with several programming languages such as HTML, CSS, MYSQL, and PHP. After that start designing your website via two prime languages which are HTML and CSS. Next, create the database via MYSQL and make sure that it is compatible with your design. Then connect your database with your design using PHP; moreover, it is mandatory that you be exceedingly cautious during this process since it needs a keen accuracy to be fulfilled. Finally, buy a domain for your website and afterward upload it to a reliable hosting.
